

ABSTRACT OF DISCLOSURE

A system and method for delivering safety and security information that includes at least one event monitor. Each event monitor has an output. The
5 system also includes apparatus for predetermining criteria for sorting the outputs of respective event monitors, apparatus for predetermining the format of a message related to respective events, apparatus for receiving the respective outputs of each of the event monitors and apparatus for sorting the outputs, based on the predetermining criteria for sorting the outputs, into
10 categories related to distinct channels of communication, in addition to apparatus for delivering messages based on the predetermining criteria and predetermined format. In some forms the invention the apparatus for predetermining criteria for sorting the outputs of respective event monitors includes a web site accessible by an end-user. Similarly, the apparatus for
15 predetermining the format of a message includes a web site accessible by an end user. The web site may be accessible only with a predetermined username and password.
